故障诊断

1. 音箱无法发出声音:

音箱的音量旋钮或增益旋钮没有被打开,可以尝试将音箱的所有旋钮调大后再做尝试;

检查一下您的乐器或者手机是否为正常工作状态,若外部设备损坏也可能导致音箱不工作。

2. 蓝牙无法连接:

查看蓝牙是否能正常开启,蓝牙开启时指示灯会闪烁,并伴随有提示音;

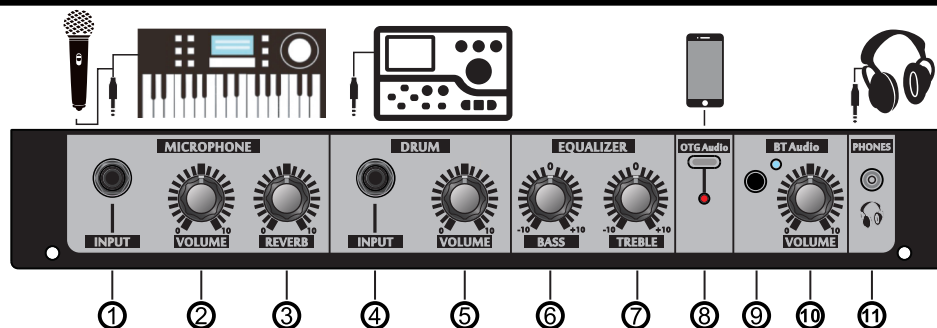

若蓝牙的指示灯闪烁之后很快又常亮,则可能是蓝牙已被其他设备连接了;可能是手机的问题,建议使用另外的一部手机去尝试连接音箱的蓝牙。

3. 音箱噪声大:

尝试把所有外接设备拔出,包括各种乐器设备以及音箱的充电线;

检查是否为音箱与周围的其他电器设备相互干扰而导致的噪音。

Fault diagnosis

1. The speaker is unable to produce sound.

The volume or gain knob on the speaker is not turned up. Try increasing the settings on all the knobs on the speaker before attempting again.

Check to see if your instrument or phone is functioning properly. Damaged external equipment could also cause the speaker not to work.

2. Bluetooth connection failure:

Check if Bluetooth is functioning properly. When Bluetooth is enabled, the indicator light will blink, accompanied by a beeping sound.

If the Bluetooth indicator light blinks rapidly and then stays on continuously, it may indicate that Bluetooth has been connected to another device.

It's possible that the issue lies with the phone. I recommend trying to connect the speaker's Bluetooth using another phone.

3. The speaker produces a lot of noise.

Try to disconnect all external devices, including various musical instrument equipment and the charging cables for the speakers.

Check if the noise is caused by interference between the speaker and other electrical devices nearby.
